-  **INFRASTRUCTURE**

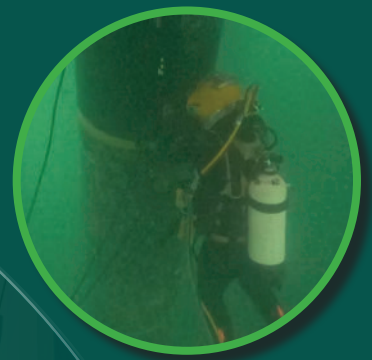

At Lanowrap Tape, we are driven by a passion for environmental responsibility and technological innovation. Learn about our commitment to revolutionize corrosion protection in industries exposed to harsh conditions. Explore our values, mission, and the team of experts dedicated to making a positive impact on both infrastructure resilience and environmental conservation. Let's hear about the driving force behind Lanowrap Tape.

Shaun Williamson is a seasoned professional in the field of corrosion protection and sustainable solutions. With a wealth of experience spanning over 20 years in marine asset maintenance and steel pile and pipeline repair, Shaun has been at the forefront of developing innovative systems that prioritise both performance and environmental sustainability.

LANOWRAP

LanoWrap is an eco-friendly corrosion protection system (If it's not green, it's not clean) designed to safeguard steel piles, inground pipelines, steel structures, valves, concrete, and marine piles in harsh environments, using environmentally sustainable materials. Sourced and made from Australian Lanolin oil.

Discover cutting-edge, environmentally friendly technologies designed to safeguard structures in challenging environments. Explore our innovative solutions that not only provide alternative environmental positive corrosion protection but also contribute to a more sustainable future.

ALL ABOUT LANOWRAP TAPE

Durability: LanoWrap Tape offers long-lasting protection against corrosion, physical damage, and environmental stressors such as UV rays, saltwater, oils, and chemicals. With a 30 year service life and shelf life.

Versatility: Available in various sizes, LanoWrap Tape can be used across industries and applications ranging from small hydraulic fittings to large marine piles, automotive components, and plumbing and water distribution systems.

Ease of Application: LanoWrap Tape is cold-applied and requires minimal tools, making it quick and easy to apply on-site. Mastic is used to ensure smooth and effective adhesion.

Waterproofing and Abrasion Resistance: The tape provides a reliable waterproof barrier and resists wear, ensuring long-term protection in demanding environments.

By choosing the appropriate tape width for each application and using Profiling Mastic where necessary, you can ensure optimal protection and performance for your hydraulic, marine, automotive, plumbing, and water distribution systems.

Lanowrap is now in full production, with the following options available to cover all types of applications: Please see the Attached Application sheet.

- Lanowrap Tape: Available in 25mm, 50mm, 100mm, 150mm, and 200mm x 10-meter rolls.
- Lanowrap Primer: 4 KG
- Lanowrap Mastic: 3 KG

CORROSION PROTECTION FOR:

- Hydraulic Fittings
- Plumbing Application
- Automotive Components
- Marine Fittings
- In-Ground Pipelines
- Steel Footings & Threaded Rod
- Mining Infrastructure
